## Introduction

---

**We are Celloglas.** We add value to printed matter for brands, retailers and publishers; often working directly with printers, print management companies or designers. We offer a wide range of solutions including decoration, protection and enhancement. With three sites offering full UK coverage and a wealth of experience across a number of markets - we're the UK's largest print finisher.

## Varnishing & Coating

---

### 3 x Sakurai Screen Spot

Maximum sheet size 720 x 1020mm | Minimum sheet size 450 x 310mm

#### Products

Spot Gloss / Matt UV | Re-Moist Gum | Fragrance Burst | Glitter UV & Waterbased | Silver & Gold Latex | Hi Build Spot UV | Pearlescent UV | Textured UV | Tinted UV (coloured varnish) | Photochromic | Glow in the Dark | Thermochromic

#### Notes

For best results please ensure all inks are fully dried. Most varnishes are intended as a decorative finish. Therefore, they can crack when folded or cut. Try to avoid putting UV varnish over creases or folds and away from trimmed edges. As UV varnish is a liquid which is cured (dries) by UV light, it should be applied to coated substrates or over lamination. Flexo coating is a print process. We therefore need a grip and sidelay to maintain accurate register. We need a solid black, imposed single spot file to make a screen with register marks.

# Lamination

---

## Billhofer FK76 Laminator

Maximum sheet size 720mm x 320mm | Minimum sheet size 225 x 320mm

### Products

Gloss / Matt / Silk OPP wet or dry | Cellogreen Matt / Gloss | Pearlescent UV | Holographic | Semitone | Soft Touch | Anti-Scuff Lamination Matt / Gloss | Coloured Film | Textured Lamination

### Sites

Leicester

## EK76 Billhofer water based laminator

Maximum sheet size 740 x 1020mm | Minimum sheet size 320mm x 225mm

### Products

Gloss / Matt / Silk OPP wet or dry | Soft Touch Lamination | Linen Lamination / Nylon | Cellolux | Holographic | Anti-Scuff Lamination | Cellogreen – Gloss / Matt / Silk

### Notes

Please allow for 10mm print and sealer free around all four edges. For best results ensure the print is fully dry. The final finish of the lamination will depend upon the surface of the material. The smoother the surface, the better the result. Try to minimise spray powder and paper debris.
